

# Energy Storage Solutions

EnergyCell® Batteries and Enclosure Systems from OutBack Power

OutBack provides a full family of energy storage solutions, including both **standard** and **advanced battery technologies**, as well as premium and standard series racking and **enclosure systems**.

## EnergyCell® Batteries

### EnergyCell RE

- Valve Regulated Lead Acid (VRLA)
- Designed for Renewable Energy Applications
- Top Terminal Design
- High Cycle Life and Recharge Efficiency
- Voltage Rating: 12V

### EnergyCell RE

- Valve Regulated Lead Acid (VRLA)
- High Cycle Life and Recharge Efficiency
- Front Terminal Design
- Up to 99% Free of Electrolyte Maintenance
- Voltage Rating: 12V

### EnergyCell GH

- Valve Regulated Lead Acid (VRLA)
- Designed for AC Coupling Solutions
- Front Terminal Design
- 18-Month Shelf Life at 25°C
- Voltage Rating: 12V

### EnergyCell RE High Capacity

- Valve Regulated Lead Acid (VRLA)
- Designed for Large Capacity Applications
- Modular Terminal Design
- Custom Racking Designs Available
- Voltage Rating: 2V

## Enclosure Systems

### OutBack Premium Series Integrated Battery Racks (IBR)

OutBack's Premium Series IBR offering is **engineered for use with maintenance-free, front terminal EnergyCell batteries** and is ideal for applications requiring up to 600Ah of energy storage. The IBR-2 houses up to 8 batteries and the IBR-3 accommodates up to 12 batteries.

### OutBack Standard Series Battery Enclosures (OBE)

OutBack's Standard Series OBE offering **accommodates maintenance-free, top terminal EnergyCell batteries** and is ideally suited for value-oriented applications requiring up to 212Ah of energy storage. The OBE-1 and OBE-2 accommodate 4 and 8 batteries respectively.
